

Ray, Line Segment, and Angle

Ray

A ray is a portion of a line that starts at a point and continues forever in one direction

- The term is important in real life because it's like a flashlight. It starts from somewhere and keeps going.

Line segment

A line segment is a portion of a line consisting of two points and all points between them

- This term is important in real life because think about it as a distance you are traveling from one place to another, you always think of distance in between them.

Angle

An angle is two rays forming together at the end point

- This term is important in real life because when you're building something or even doing anything, you think of the angle you adjust it as.
