

Postulates about point, lines, & planes

Point- A point is a location but with no size

Using points in real life:

Believe it or not, we use points a lot in our everyday life. When we meet our friends at lunch, when you walk to your house or even to school. You are walking or waiting at a place; a point.

Line- A line is a straight figure that has no thickness and extends forever in both directions

Using lines in real life:

You use lines every day to get to where you go. When you walk the crosswalk, you're walking a line. When you walk a hallway you're also walking a line.

e VIC 3000, Australia

Planes: A plane is a flat surface that extends infinitely in two dimensions

Using planes in real life:

Do you play any sports? Whether it be football, tennis, volleyball, or even basketball. It's a flat surface that can extend forever both ways. Even if you have gym, you're on a plane!
